

Knowledge Organiser for Year 3 & 4

Topic: Rainforests and Chocolate

Key Questions			
 Can you 	u investigate the lives of the i u identify the types of produc u use colour, expression, textu	on and the impact it has on the rainfore	rest? rt?
Key Information			
The rainforest and its locations.	the world's oldest natural he have evolved within them. located near the equator b	prest that receives lots of rain every year. abitats, and an amazing array of animals The tropical rainforests of the world are o etween the Tropic of Cancer and the Tro s lots of rain because it is very hot and w	s and plants iften ppic of
The layers of the rainforest.	Most rainforests are structured in four layers: emergent, canopy, understory, and forest floor. Each layer has unique characteristics based on differing levels of water, sunlight, and air circulation and these layers host several species of tropical animals and tropical plants.		
	trees (basically taller than n rest of the plants in the area the ground level. 2. The nex contain the majority (about rainforest. The canopy laye contains overlapping tall tre organisms below them. 3. Th very humid and damp. Suc layer alive. The understory is climbing plants, and young low sunlight. 4. Last but not often described as the dark rainforest as it receives less receives all fallen leaves, tw layers above it. All these mo	I rainforest from the top is called the end nost trees in the forest) that protrude out a. The average height is about 70-100m fit tayer is the canopy layer, which is know 60 to 90%) of living species in the whole which is about 100 feet above the grou- ees that act as a roof over the rest of the ne third layer, is the understory layer. This n humidity level is what keeps the anima composed of shrubs, herbaceous plants trees that are well adapted to areas rec the least is the Forest floor layer. This layer est and most humid layer of a tropical han 2% of the total sunlight. The Forest flo- rigs, branches, fruits, and seeds from the sterials, coupled with the hot and humid mposition, making the forest floor the mo	rom n to und, layer is is in this s, fems, teiving r is or three
The people and products of the rainforest.	different groups of people. great knowledge of the pla building materials, food, tra use products from the rainfo tyres. Our world's rainforests are u 2000 trees are cut down ea	These indigenous people have lived in the nts and animals that are found there – p nsport, clothing, decoration, art, music a prests on a daily basis including wood, fo nder threat from a number of sources ind ch minute. Many rainforest animals are h	n rainforest alone. The rainforest provides a home for ne rainforest for thousands of years and have a roviding them with everything they need to live: and medicine. Millions of people all over the world od and plant/oil items used in paints, cosmetics and cluding farming and industry. It is estimated that nunted, sometimes to extinction for their skins, vorking to protect and sustain our rainforests.
Chocolate as a product of the rainforest.	Chocolate comes from the pods that grow on cocoa trees, which are small trees that grow in rainforests. Since the 2000s, Western Africa produces almost two-thirds of the world's cocoa, with Ivory Coast growing almost half of that amount. Sadly, cocoa farmers usually clear tropical forests to plant new cocoa trees rather than reusing the same land. That practice has spurred massive deforestation in West Africa, particularly in Ivory Coast. Experts estimate that 70% of the country's illegal deforestation is related to cocoa farming.
